

MOLECULAR PHARMACOLOGY AND THERAPEUTICS (PHD)

The PhD in Molecular Pharmacology & Therapeutics is dedicated to training outstanding scientists in the pharmacological sciences. After successful completion of formal course work students will have acquired in-depth knowledge of pharmacology and basic knowledge of molecular and cellular biology, biochemistry, and physiology. Our training provides a solid foundation for successful scientific careers in a wide range of areas, including academia, government, and the pharmaceutical industry.

Curriculum

The Graduate School at the Health Sciences Campus offers a PhD degree program in the biomedical sciences through the Integrated Program in Biomedical Sciences (IPBS). IPBS is an umbrella admission program in which students are admitted and undergo laboratory rotations before choosing an advisor and specialization track.

The following six tracks are offered in the IPBS:

- Biochemistry, Molecular & Cancer Biology
- Cell & Molecular Physiology
- Integrative Cell Biology
- Microbiology & Immunology
- Molecular Pharmacology & Therapeutics
- Neuroscience

Students receive rigorous training in the fundamentals of the scientific method, oral and written scientific communication, data analysis and presentation, critical analysis of scientific literature, and practical laboratory skills through a combination of coursework and dissertation research. Dissertation research is conducted under the direction of an advisor and Dissertation Committee.

IPBS Course Requirements

The PhD program consists of 48 credit hours of course work in the first two to three years plus research culminating in a dissertation. The course work consists of a Core Curriculum of 14 credit hours, at least 15 credit hours of electives and up to 19 credits hours of Research. Students whom take more than 15 credits of electives can reduce the number of Research credits accordingly. The electives include track-specific courses plus specialized courses offered by any track. Details about the electives required for each track can be found in the individual IPBS PhD track catalog pages. IPBS students also enroll in a Seminar and Journal Club course every semester. Students enroll in Dissertation Supervision after they have completed the required 48 credit hours.

Code	Title	Hours
Core Curriculum		
BMSC 402	Statistical Methods for Biomedical Science	3
BMSC 405	Ethics in Biomedical Sciences	1
BMSC 410	Biochemistry and Molecular Biology	4
BMSC 412	Cell Biology	4
BMSC 416	Methods Biomedical Science	1
BMSC 418	Presentation skills	1
Track Specific Requirements		
Track Required Coursework		15
Research ¹		19
Seminar		
Journal Club		
Dissertation Supervision		0
Total Hours		48

¹ Students can choose to take more than 15 credits of electives and reduce research credits accordingly.

Molecular Pharmacology and Therapeutics Track Specific Course Requirements

The PhD in Biochemistry, Molecular Pharmacology and Therapeutics requires 48 credit hours and consists of the IPBS Core Curriculum plus a Molecular Biology and Therapeutics Required course and Electives, Research, Journal Club, Seminar, a comprehensive examination, and completion of a dissertation.

Code	Title	Hours
IPBS Core Curriculum (see above)		14
Molecular Pharmacology and Therapeutics Requirements		
<i>Molecular Pharmacology and Therapeutics Electives</i>		<i>15-16</i>
BMSC 414	Systems Biology	
PHAR 407	Fundamentals of Drug Discovery and Development	
PHAR 408	Molecular Basis of Disease and Therapeutics	
PHAR 409	Principles of Pharmacology	
PHAR 410	Signal Transduction	
PHAR 415	Current Topics in Pharmacology and Epidemiology of Disease	
PHAR 420	Pharmacovigilance: A Practical Approach	
PHAR 406	Special Problems in Pharmacology	
PHAR 499	Research (hours vary) ¹	1-12
PHAR 405	Pharmacology Journal Club	1
PHAR 600	Dissertation Supervision	0
Total Hours		48

¹ Students are expected to complete 18-19 credit hours of PHAR 499 Research.

Comprehensive Examination

In addition to the course work, students must pass a Comprehensive Exam which involves preparing a mock grant proposal. The Comprehensive Exam also tests the student's understanding of the scientific method, oral and written communication skills and general biomedical research knowledge. The Comprehensive Exam usually is taken during the summer of the second year. The written mock grant

proposal is presented to the student's Comprehensive Exam Committee and evaluated during a meeting with the Committee. Students who pass their Comprehensive Exam are permitted to continue in the IPBS.

Research and Dissertation

The Integrated Program in Biomedical Sciences is a research-intensive PhD program. Students are expected to undertake an independent, original experimental study resulting in new and significant contributions to knowledge in the biomedical sciences.

Lab Rotations: Students undergo three laboratory rotations beginning in the first semester to identify a research advisor. Students select laboratories for each rotation from a list of available advisors and in consultation with the Associate Dean for Graduate Education. After identifying an advisor, students select a specialization track and begin attending the Journal Clubs, Seminars and taking track-specific electives. Each track has a Graduate Program Director to advise students.

Dissertation Research: After students pass their Comprehensive Exam, they form a Dissertation Committee and meet with the Committee starting in the third year to receive approval of their Dissertation Proposal. Research on the dissertation continues with regular Dissertation Committee meetings until the completion of the dissertation. The final dissertation must be presented in a public seminar, approved by the Dissertation Committee and deposited in a public database.

Graduate & Professional Standards and Regulations

Students in graduate and professional programs can find their Academic Policies in Graduate and Professional Academic Standards and Regulations (<https://catalog.luc.edu/academic-standards-regulations/graduate-professional/>) under their school. Any additional University Policies supersede school policies.

Learning Outcomes

Upon completion of this program, students will be able to:

- Demonstrate a general knowledge base in the biomedical sciences with an understanding of fundamental biochemical, molecular and cellular processes and common biomedical research methods.
- Demonstrate a deep knowledge in molecular pharmacology and therapeutics.
- Articulate the approaches by which drugs are discovered and developed, from molecular mechanisms through clinical trials, drug safety and pharmacovigilance, including ethics and research integrity.
- Propose original biomedical research questions and design experiments to address these questions.
- Execute critical experiments to address the relevant biomedical research questions.
- Search and critically evaluate the scientific literature and scientific data.
- Clearly and effectively communicate scientific information in both oral and written forms.
- Incorporate high standards of ethics into research design, execution, data interpretation and presentation.
